

INFO HUB COMPUTER TRAINING PROGRAM

INFO HUB COMPUTER TRAINING PROGRAM

Hello! Let me introduce my experience in computer tutorial training program exploring the world of technology and computers. During this time, I've not only gained a deep understanding of various computer-related topics but also improved my ability to understand complicated ideas in a simple and interesting way. Whether making complex software easier to understand, or helping people understand computer hardware, I'm very passionate about sharing knowledge and creating learning experiences.

After finishing this training, I receive a certificate in Computer Tutorial Training as I kept learning and using what I know about computers. Fast forward, I'm now a college student with the course of Bachelor of Science Information Technology. I'm studying more about it where I could use what I know to help me understand computers better.

As the digital world kept getting more advanced, I didn't stop learning. I kept adapting and making new tutorial materials that matched the new technologies and trends. My main goal, then and now, is to make complicated computer stuff easier for regular people to understand by explaining things step by step and not using difficult words. My journey after graduation has been all about making technology simpler for everyone, helping individuals and businesses use computers well, and making sure that no matter where someone comes from, they can do well in our increasingly digital world.
